

Naylor smooth finished lintels score at Soccer Grounds

Naylor's Hi-Spec range of prestressed concrete and steel tray lintels was specified and used in the new East Stand at Barnsley Football Club.

The East Stand at Barnsley's Oakwell Ground cost in excess of £2.5m to build and comprises a cantilever structure with over 7000 seats.

Naylor's high strength lintels were used to support the walls above the internal openings and their unrivalled smooth finish enabled them to be left unplastered as part of exposed blockwork, resulting in significant time savings on site.

Naylor lintels were also used subsequently on the new Ora Stand at the ground's Pontefract Road End.

They have also been used on ground developments at many other clubs including:

Leeds United
Liverpool
Manchester City
Norwich City
Sheffield United
Sheffield Wednesday

The versatility of the Naylor Combination System and the extent of the Naylor range enable any wall width and construction to be accommodated.
