

Naylor Retaining Wall Lintels

Naylor Specialist Lintels have recently been specified for a new retaining wall for The Ring Group's new warehouse at Gelderd Road in Leeds.

The Naylor technical team worked closely with the Contractor (Yorkhouse Construction) on site to specify over 400 number 140mm wide x 215mm high prestressed concrete lintels. Each lintel had to be absolutely exact in length to slot down between the steel columns erected on site. The units were delivered to site in consecutive loads and were installed immediately.

Naylor specialise in special lintels and their free design and technical service can be contacted in any of the following ways:
