

Naylor Takes the Heat Off Students

Over 300 special concrete lintels and 250 L-Strip stainless steel angles are being supplied to a new student accommodation block in Newcastle upon Tyne.

The Naylor Technical Department were called in to design specially sized lintels to close off the cavity wall at all window and door openings and have 1 ½ fire resistance.

The deliveries to the site are being phased over a 3 month period because of a restricted access area.
