

Chem-Spec Lintels used at Sewage Treatment Works

Naylor Specialist Lintels have recently been specified for use in a new sewage treatment plant at Huyton, Merseyside.

The Naylor technical team worked closely with the Contractor (KMI Water) on site to specify over 400 number 100mm wide x 145mm high prestressed concrete lintels.

Chemically resistant lintels were chosen as the lintels were to be installed inside the sewage treatment tank and would be subject to a constant flow of running water containing chlorine.

Naylor specialise in special lintels and their free design and technical service can be contacted in any of the following ways:
