Highways

Drain, storm and duct products
for the highways sector

naylor

N

Entrepreneurial and modern in our approach

The first business to be established by the Naylor family in 1890, Naylor has been trusted by the construction industry for over a century.

We pride ourselves on providing a comprehensive range of high quality, high performance drain, duct and sewer products as well as a growing range of storm related products which are used in highways, power, utilities, commercial, industrial, housing and public realm applications.

Naylor supports the delivery of construction and major infrastructure projects nationwide and, as a family owned business, has a reputation for being straightforward, supportive and easy-to-deal-with.

We are also committed to making significant, ongoing investment in our business and UK manufacturing sites to further develop our product offer, reduce our carbon footprint and ensure we continue to meet the needs of our customers.

20 years' supporting the highways sector

With more than 20 years' experience of working with the highways sector, Naylor has comprehensive sector knowledge and a proven track record which includes working closely with National Highways and Transport Scotland. Naylor and its flagship product range, 'MetroDrain', is also ranked No.1* by National Highways for its work with the Tier One contractors.

Our products are designed to help the highways sector tackle key issues including environmental pollution caused by surface water runoff, flash flooding and the need to create a larger EV charging network across the UK.

We are also making ongoing and significant investments in R&D, product development and the creation of additional manufacturing capacity which means we can continue to support the highways sector as it continues to focus on the delivery of mega-schemes included in RIS2 whilst gearing up for the introduction of RIS3 in 2026 and its focus on local road maintenance and renewal.

* Ranking determined by National Highways' dynamic supplier panel

Engineered for life

Our products meet the specific requirements of the Highways Agency Manual of Contact Documents for Highway Works, are an approved alternative to the products in Table 5/1 of the Specification for Highway Works and can be adopted under the Highways Act (1980).

Engineered for life, products within the Naylor range are well designed, offer the highest levels of durability and exceptional in-situ performance. Naylor is also expanding its range of lower carbon versions to support the highways sector in the delivery of its net zero ambitions.

Naylor products enable the highways sector to:

- Collect and dispose of surface / sub-surface water, enabling effective storm water management
- Protect and maintain the underlying road structure
- Help prevent hydro-plaining and related highway blockages
- Tackle environmental pollution caused by surface water runoff
- Provide motorway communications, lighting, signalling and power supply to a range of services

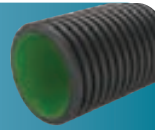

Core highways products

drain

MetroDrain

BBA certified, sub-surface drainage system designed for environmental water management.

drain

MetroDrain^{LC}

Provides all the benefits of our original MetroDrain system but is manufactured using 48% less embedded carbon.

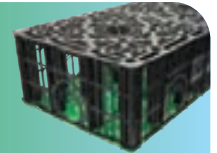

storm

SmartSponge

Tackling a key issue for the highways industry, SmartSponge absorbs hydrocarbons in surface water run-off and can be provided as a block for drainage gullies.

storm

AquaVoid

Manufactured from recycled polypropylene and designed to deal with stormwater runoff at or near to its source in car park applications.

duct

Class 1 & 2 Duct Systems

Manufactured in accordance with ENATS 12-24 for use in high voltage applications including EV infrastructure networks.

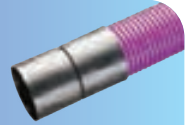

duct

Class 2 Twin Wall

HDPE pipe for underground ducting in lower voltage applications.

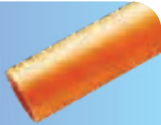

duct

Class 3 Twin Wall Utility

HDPE pipe manufactured to BBA and BS EN 61386 and supplied in various colours to suit NJUG. Suitable for motorway signalling, communications and lighting.

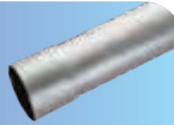

duct

Smooth Wall Duct

A range of smooth bore solid wall duct manufactured to industry standard specifications in many ODs, colours, wall thicknesses for a wide range of applications.

duct

General Purpose Duct

A highly popular range designed for use in a variety of street lighting applications.

Working in partnership, delivering social value

The provision of social value in the local communities in which we live and work has been a core part of Naylor's DNA for more than a century. We also recognise that an ability to create social value is extremely important to a sector in which Government legislation effectively mandates the provision of social value by organisations such as National Highways.

The Naylor team works in partnership with National Highways, Tier One contractors and merchants to deliver a wide range of social value schemes across the UK whether that involves supporting local schools, creating recycling projects or getting involved with conservation projects. Naylor is also proud of its own track record in the delivery of social value under the three pillars of employment, community and environment.

Naylor continues to invest significantly in all aspects of its operations to enable it to become a net zero business by 2050.

A construction worker wearing a white hard hat and an orange safety vest is shown in profile, looking towards the right. In the background, there are several large stacks of green pipes, likely for construction or industrial use, arranged in rows. The sky is a clear, bright blue with a few wispy clouds. The overall scene is outdoors and well-lit.
